

## **Let's Get Kids Immunized: Recommended Immunization Schedule for Children 0-18 Months of Age**

The Montana State Immunization program has developed an easy to read immunization schedule for parents. This is a colorful schedule that breaks down what recommended vaccines are needed for a child when they reach a certain age. Immunizing children according to the recommended schedule set by the Advisory Committee on Immunization Practices (ACIP) can protect children against 14 vaccine-preventable diseases. By immunizing, it helps to protect the health of our community, especially those who are too young to receive certain vaccines, those who may not be vaccinated for medical reasons, or those who cannot make an adequate response to vaccination. If you would like to order some of the Immunization Recommended Schedules, please send an email to [hhsiz@mt.gov](mailto:hhsiz@mt.gov) to place an order. You can also visit the immunization website for more information on vaccine programs and requirements at [www.immunization.mt.gov](http://www.immunization.mt.gov) .
